

Alex Fuentes

STAFF FRONTEND ENGINEER · VALENCIA, SPAIN

alfupe@gmail.com +34 625 638 441 linkedin.com/in/alfupe github.com/alfupe

PROFILE

Staff Frontend Engineer with more than 12 years building web products. My remit today is the frontend platform of an entire organization: setting the technical standard —testing, CI/CD, observability, design systems, AI-assisted development—, taking it to production and getting teams to adopt it on their own. The initiatives I lead start by solving the problem in a pilot project, turn into a guide or a tool, and then spread across the rest of the organization.

HIGHLIGHTS

- **Modernized the CI/CD of an entire frontend organization:** migrated more than a dozen projects from Jenkins to GitHub Actions, plus a new library publishing system —automatic and with no manual steps— adopted as the standard by both frontend and backend.
- **Made technical debt measurable:** built the tool that scores how outdated the application estate is —observability, dependencies, CI/CD— and which became the instrument for prioritizing frontend modernization.
- **AI strategy for development:** defined the Claude Code-assisted development workflow, rolled it out to every frontend team and published a set of code modernization tools they now apply on their own.

EXPERIENCE

Mercadona Tech Staff Frontend Engineer

MAY 2024 – PRESENT

Frontend technical reference with cross-cutting impact across the company's logistics and ecommerce verticals.

PLATFORM AND CI/CD

- Led the CI/CD migration from Jenkins to GitHub Actions: validated the approach by running the first end-to-end migrations myself, then built reusable workflows and the supporting technical documentation.
- Designed and rolled out the library publishing system: automatic versioning and changelogs derived from repository history.
- Built the internal tool that scores how outdated the application estate is —roughly 60 applications and libraries— across observability, dependencies and CI/CD status, and which became the instrument for prioritizing and tracking frontend modernization.
- Unified access to frontend products on a single federated login (OIDC) library.

QUALITY AND TESTING

- I contribute to the company's frontend testing standard —outside-in TDD with React Testing Library and tests driven by user behaviour—: I work on improving our testing framework and spread good practice through articles, talks and workshops.
- Took part in fixing one of the most common causes of unstable tests: diagnosing the origin, correcting it in the shared testing library and rolling that out to the affected projects, which cut down the pipeline runs that had to be repeated.

OBSERVABILITY

- Drove the frontend monitoring library and its adoption across every project, with Sentry properly configured for debugging in production. I coordinate the group defining the organization's observability standard: latency and error metrics, APM, distributed tracing and Elastic/Kibana dashboards.

DESIGN SYSTEMS

- Led the choice of technical foundation for the new web design system through an evaluation framework of my own —performance, accessibility and developer experience, with weighted criteria and veto criteria—, which produced a system built on React Aria. I also contribute to maintaining and evolving the company's other design systems.
- Built the end-to-end Design Tokens pipeline: from the design tool to per-platform variables —web, iOS and Android— generated automatically in CI and published as a package teams can install.

AI APPLIED TO DEVELOPMENT

- I lead AI adoption across the frontend teams: designed the Claude Code-assisted development workflow, built on the Superpowers framework, ran team-by-team onboarding and track real usage and the friction that shows up.
- Published a catalogue of code modernization tools —language, library and CI/CD migrations— that teams apply on their own, continuously improved with their feedback and validated on real projects first.

TECHNICAL LEADERSHIP

Designed and launched the frontend squads model: small groups with explicit ownership and distributed leadership. I support frontend engineers joining new teams through mentoring, pairing and technical reviews, and I take part in technical hiring interviews.

Mercadona Tech Frontend Engineer

NOV 2022 – MAY 2024

- Product development in logistics and operations teams with React and TypeScript, applying outside-in TDD from day one.
- Modernized applications carrying years of technical debt: replaced obsolete test suites, migrated to TypeScript, added observability and brought dependencies and CI/CD up to date.

EDEM Escuela de Empresarios Lecturer

DEC 2019 – JUN 2026

Taught WordPress and Shopify on the Master's in Entrepreneurship and Leadership and the Master's in Marketing and Online Sales.

Openbank

Frontend Developer

AUG 2022 – NOV 2022

Microfrontends and hybrid views of the digital bank’s web application with React, Redux, TypeScript and Flow; Jest, Testing Library and Enzyme.

Cecotec Innovaciones

Frontend Developer

DEC 2020 – AUG 2022

Internal management and logistics applications and libraries with React 17, GraphQL (Relay) and Storybook. Test suites with Jest, Testing Library and Cypress.

EARLIER ROLES

Sportmaniacs

Frontend Developer

SEP 2018 – NOV 2020

Frontend of a sports timing platform with React 16.

Notikumi

Frontend Developer

NOV 2016 – SEP 2018

Company applications with Angular 2+ and TypeScript.

Nectar Estudio

Frontend Developer

APR 2016 – NOV 2016

HTML, SASS, JavaScript, jQuery, PHP and MySQL on Yeoman and WordPress. Clients: Lois Jeans, APIV, The Keen Folks.

Increnta

Web Developer

APR 2014 – APR 2016

Front and back (80/20) on an in-house MVC with PHP, MySQL and JavaScript: corporate sites, ecommerce and inbound marketing. Clients: Robert Bosch España, Telefónica, CEOE, Jeanologia.

Regalamos.es / Splitfy.com

Frontend Developer

DEC 2013 – APR 2014

Responsive frontend with Yii, Bootstrap 3 and jQuery.

STACK

LANGUAGES, FRAMEWORKS	TypeScript, JavaScript (ES2015+), React (hooks, Redux), React Router, Angular 2+, HTML5, modern CSS (SASS, custom properties, container queries), Node.js
TESTING	Outside-in TDD, React Testing Library, Wrapito, Mock Service Worker, Jest, Playwright, Cypress, contract testing, Mother Object and Builders
PLATFORM, CI/CD	GitHub Actions, release automation and semantic versioning, automated dependency updates, Docker, private npm registries, monorepos, Jenkins (legacy)
OBSERVABILITY	Sentry and sourcemaps, Elastic/Kibana, APM and distributed tracing, latency and percentile metrics, Amplitude, feature flags with Unleash
DESIGN AND AI	React Aria, Storybook, Design Tokens, accessibility (WAI-ARIA, keyboard navigation), Figma · Claude Code, skill and plugin design, MCP
OTHER	GraphQL (Relay), REST, OIDC, frontend architecture, PWA, WordPress and Shopify (development)

SPEAKING AND COMMUNITY

- **Talk** “TDD with AI: the veteran and the influencer who can’t agree (but still write tests)”, VLCTechFest 2026, Las Naves, Valencia (May 2026): a two-hander, delivered in English on the event’s main track.
- **Article** “Cómo escribir tests de frontend que imitan a tus usuarios” (How to write frontend tests that mimic your users), Mercadona Tech engineering blog on Medium (Dec 2025), with a public example repository.
- **Workshop** “Outside-In TDD in frontend development”, Awakatech community, Valencia (Mar 2026): organizer and speaker. **TDD with React workshop for Woman in Tech**: three editions.

EDUCATION AND LANGUAGES

EDUCATION	BSc in Multimedia, Universitat Oberta de Catalunya (in progress) · Ongoing training in TypeScript, architecture and engineering practices
LANGUAGES	Native Spanish and Valencian · Working English, around B2: spoke in English at VLCTechFest 2026, read technical documentation daily and hold professional conversations
